

KINDRED

Skills for Life. Currency for Community.

1. Vision and Core Value Proposition

KINDRED is a decentralized, community-driven platform designed to bridge the gap between financial constraints and home maintenance. By fostering a "brother's keeper" ethos, the app empowers individuals to handle simple, non-skill-intensive tasks through peer-to-peer guidance, saving them significant professional costs while building localized resilience.

The Core Problem: People often pay high professional fees for tasks they could do themselves with 10 minutes of expert guidance. KINDRED democratizes this expertise.

2. The \$KIND Economy (Tokenomics)

The platform operates on the **\$KIND** token, an ERC-20 asset on the Polygon Network, designed to incentivize mutual aid.

Mechanism	Description
Transaction Fee	A 5% fee is applied to every successful task completion.
Fee Allocation	50% to Central Treasury, 30% to Curation Pool, 20% Burned.
Starter Stipend	Verified new users receive 10 \$KIND to fund their first request.

Inflation is managed through the **Burn** mechanism:

$$Supply_{\{new\}} = Supply_{\{initial\}} - \sum(0.2 \times Fee)$$

3. Core User Workflow

The Seeker Journey

- **Post:** Seeker describes the issue with photos/video and sets a \$KIND bounty.
- **Match:** The app notifies nearby Helpers with matching skill tags.
- **Escrow:** Once a Helper is selected, \$KIND is moved to a secure Smart Contract.

The Helper Journey

- **Execute:** Guidance is provided via secure in-app Video Call or In-Person meetup.
- **Receive:** Upon Seeker confirmation, \$KIND is released from Escrow to the Helper's wallet.

4. Governance and Aspiration (The Ascension System)

KINDRED utilizes a meritocratic hierarchy where reputation earns social capital and civic influence.

Tier	Requirements	Privileges
Apprentice	3 Tasks Completed	Basic access to the marketplace.
Journeyman	1,000 \$KIND Earned	Eligible to act as a Curator for disputes.
Master	5,000 \$KIND Earned	Voting rights in the KINDRED DAO.
Elder (Hero)	10,000 \$KIND + Followers	Civic leadership and "Hero Spotlight" visibility.

5. Technical Architecture

- **Blockchain:** Polygon (Layer 2) for low-gas, high-speed transactions.
- **Smart Contracts:** Solidity-based ERC-20 (\$KIND) and ERC-721 (Hero Badges).

- **App Stack:** React Native (Mobile), Node.js (API), and PostgreSQL (Data).
- **Infrastructure:** Distributed Escrow logic to ensure trustless payment releases.

6. Go-to-Market Strategy

Launch follows a three-phase "Seed-Anchor-Scale" model:

1. **Seed Phase:** Target high-trust environments (university towns/retirement communities) to build initial Helper supply.
2. **Anchor Phase:** Partner with local businesses to accept \$KIND for goods (e.g., bakeries, tool shops).
3. **Hero Phase:** Gamify influence through "Hero Leaderboards" to drive viral user growth.

7. Investor Summary (The Ask)

Funding Target: \$2,500,000 Seed Round.

Use of Funds: 64% Development/Team, 17% Community Seeding/Marketing, 9% Security Audits, 10% Operations.

Milestone: Achieve 3,000 active users and verifiable token utility within 10 months.
